Continuation of 3. NOTE: The amendments to the claims to indicate that certain functions are performed automatically further limits the scope of the claims and would require further search and consideration.

Continuation of 11. does NOT place the application in condition for allowance because: In the remarks filed 2/27/07, Applicant substantially rehashes arguments previously presented and and already addressed in previous Office Actions. In addition, Applicant argues that the present application defines "a common identification element" as information such as patient name. Although the Examiner agrees that the specification suggests that a common identification could be a patient name, it is respectfully submitted that the term has not been defined in a specific and deliberate manner such that the scope is necessarily limited to "information such as patient name." This conclusion is based on the Examiner's reading of the originally filed specification. However, if the term is specifically defined in the specification, the Examiner requests that Applicant point to such a definition. Therefore, it is respectfully submitted that, given the broadest reasonable interpretation to one of ordinary skill in the art at the time of the invention, the user interface of Wong is interpreted to be a form of "common identification element" as claimed.
